

ASSIGNMENT SKILLS

Vancouver referencing guide

Last updated January 2023

Vancouver is a numbered referencing style, predominantly used in medical fields. It is based on the *AMA Manual of Style, 11th edition*.

This style guide is primarily for students completing assignments at Curtin University. If you are publishing (e.g. journal article, PhD), please consult the above publication as the reference examples provided here may differ from the requirements outlined in the official style guide.

Guide contents:			
In-text citations	2	Health resources	7
Numbered citations	2	Cochrane review	7
Placement of in-text citations	2	Online reference works (AMH, Martindale, MIMS, UpToDate)	7
Page numbers	2		
Author names in-text	2	Books	8
		Entire book	8
Reference list	3	Chapter in an edited book	8
Author variations	3	Thesis	9
No author	3	Conference paper	9
One to six authors	3		
More than six authors	3	Websites and social media	10
Organisation as author	3	Webpage on a website	10
Title capitalisation	3	YouTube or streaming video	10
Journal title abbreviations	4	Blog post	11
Digital Object Identifiers (DOIs)	4	Facebook	11
Sample paragraph and reference list	4	Twitter	11
		Podcast	11
Reference components and examples		Reports and legislation	12
Journal and news articles	5	Government or organisation report	12
Journal article	5	Act of Parliament	12
Journal article – advanced online publication	5	Case	12
Journal article published in a supplement	6		
Journal article with article number (eLocator)	6		
Newspaper article	6		

In-text citations

Numbered citations

In the Vancouver style, numbers are used to denote in-text citations in your research paper. Numbers are allocated consecutively to each reference as it is cited for the first time in the text of the assignment (i.e. the first citation that appears in-text is number one, the next unique citation that appears in-text is number 2 and so on). This number becomes the unique identifier of that source and if the source is cited again in-text, the same number is repeated. Vancouver uses superscript numbers in-text, e.g. ^{1-4,10,12}

Placement of in-text citations

Include citations:

- After the author's name, e.g. Johnson¹ explains...
- To the right of commas and full stops, e.g. This is a widely accepted theory.²
- To the left of colons and semi colons, e.g. The study lists the following³: motivation,...

Multiple citations can be inserted at a single point in-text, separated by a comma with no spaces in between, e.g. This issue has been faced by many in the industry.^{1,2,4,7}

When there are three or more **consecutive** citations, join the first and last in the series with a hyphen, e.g. The condition has been reported in a number of studies.⁴⁻⁷

Page numbers

If citing different pages from a single source at different places in the text, page numbers can be included in the citation and the source listed once in the reference list. Place the page number(s) in brackets directly following the numbered citation. Use p for a single page or pp for multiple pages, e.g. ...pain response should be considered.^{8(p83),9,12(pp3,5)}

Please check with your tutor if they require you to provide page numbers for direct quotes.

Author names in-text

If mentioning authors in text, only surnames (family names) are used. For a reference with two authors include both surnames, e.g. Avery and Williams¹ highlight the importance of this method. For references with three or more authors, list the first author then et al (meaning *and others*), e.g. Azar et al² reported on this association.

Reference list

Author variations

The following variations apply to all reference types (books, journal articles, reports, webpages etc.). Author surnames (family names) are followed by their two letter initials with no space or full stop between the initials, e.g. Smith JA.

Commas are used to separate authors' names, e.g. Khan FM, Gibbons JP.

No author

- If there is no personal author, check to see if an organisation has acted as author. If not, omit the author from the reference and list the title of the item first

Joint replacements should not cost an arm and a leg. *The Australian*. September 22, 2016;Commentary:13.

One to six authors

- List all authors in the reference

Khan FM, Gibbons JP. *Khan's The Physics of Radiation Therapy*. 5th ed. Wolters Kluwer Health; 2014.

More than six authors

- List the first three authors in the reference followed by et al (meaning *and others*)

Smith BM, Kirby M, Hoffman EA, et al. Association of dysanapsis with chronic obstructive pulmonary disease among older adults. *JAMA*. 2020;323(22):2268-2280. doi:10.1001/jama.2020.6918

Organisation as author

- List the organisation name in full

Australian Institute of Health and Welfare. *Australian Bushfires 2019-2020: Exploring the Short-Term Health Impacts*. Australian Institute of Health and Welfare; 2020. PHE 276. Accessed November 26, 2020. <https://www.aihw.gov.au/reports/environment-and-health/short-term-health-impacts-2019-20-bushfires/contents/summary>

Title capitalisation

Titles should appear in lower case except for the first letter of the first word, abbreviations, proper names, and names of clinical trials or study groups, e.g.

Krieger J, Song L, Philby M. Community health worker home visits for adults with uncontrolled asthma: the HomeBASE Trial randomized clinical trial. *JAMA Intern Med*. 2015;175(1):109-117. doi:10.1001/jamainternmed.2014.6353

Titles of whole works such as journals and books, should appear in headline style capitalisation, where all significant words start with a capital letter.

Journal title abbreviations

Journal titles are abbreviated in the Vancouver style, e.g. New England Journal of Medicine appears as N Engl J Med in the reference list entry.

A list of abbreviations is available through PubMed at: <https://pubmed.ncbi.nlm.nih.gov/>. Click on *Journals* (under *Explore*) and enter the full journal title to view its abbreviation. Alternative sources of journal title abbreviations are listed in Appendix B of [Citing Medicine](#).

Digital Object Identifiers (DOIs)

A Digital Object Identifier (DOI) is a string of numbers, letters and symbols that creates a permanent link to a journal article, book or other online document, e.g. 10.1108/HER-10-2015-0023. In the Vancouver style, DOIs are presented as metadata, not as hyperlinks, e.g. doi:10.1001/jamainternmed.2014.6353

Sample paragraph and reference list

In Australia falls are one of the main causes of injury-related hospitalisations, with the elderly representing the majority of cases.¹ Accidental falls in older persons can have a detrimental effect on their mental wellbeing.^{2,3} “The psychological aspects, especially fear of falling, loss of confidence and increased anxiety, can be more disabling than the physical ones.”^{3(p18)} It is therefore important that effective programs are implemented to reduce the incidence of falls.⁴⁻⁶
